

packets to said filter data stored by said network server so as to specify additional data packets to be downloaded;

 said network server storing in memory cache said additional data packets until said memory cache is full, and then overwriting ones of said additional data packets with subsequently received ones of said additional packets in accordance with predefined criteria;

whereby overhead associated with receiving the stream of data packets and downloading for storage a specified subset thereof is shared by a set of subscribers.

REMARKS

This amendment responds to the Examiner's telephone call on September 13, 1994 to the undersigned attorney. The Examiner indicated that the PTO file did not include an Abstract and that the submitted amendment had failed to address claims 47-50.

While the applicant's records show the submission of an Abstract with the original application, the applicant is complying with the Examiner's request by resubmitting the amendment with this amendment.

The applicant had previously addressed claims 47-50 in a draft amendment but failed to include them in independent form in the last submitted amendment. The applicant respectfully requests entry of the amendment of claims 47-50 since those claims were noted as being allowable if put in independent form.
